Dear Mr. Sharma

Re. Impression on WCL Line 2

Wish the letter find you and the project very well.

I would like to thank you for your kind help and support to Bridge Gap Engineering Inc.'s field service in WCL Line 2 project.

As I said to you, it is my first trip to India. WCL line 2 project impressed me deeply. It indicates that from the project's first purchase order issued to kiln #2 lightup on Sep.25, it only takes 16 months for an 8000 tpd cement production line to start to produce clinker and cement. It must have created the benchmark of large cement construction project in Indian cement industry. It is an amazing construction speed even in the world cement industry. In addition, a factor has to be mentioned that for a large project with 4000 workers working together on site at a peak period, there is no accident happened through the whole project period. The Wonder cement, especially the project team under your leadership is so wonderful.

Wish you and the Wonder Cement made progress every day.

Thank you. Look forward to hearing from you soon.

Best wishes,

--
